EXPERIENCE

Senior Business Analyst | Smart Gladiator LLC (LoadProof Platform) | USA

Aug 2025 - Present

- Worked as a Senior Business Systems Analyst supporting enterprise clients by translating operational and business requirements into scalable technical solutions for logistics and compliance platforms.
- Led end-to-end requirements analysis, documenting process flows, business rules, functional specifications, and system integrations using JIRA and Confluence.
- Collaborated with product, engineering, and QA teams to improve platform workflows, reporting, and operational analytics, ensuring alignment with business objectives.
- Analyzed operational data and customer usage patterns to identify optimization opportunities, supporting process efficiency, compliance tracking, and decision-making.
- Facilitated UAT, defect triage, and release validation, working directly with stakeholders to ensure delivered solutions met functional and business expectations.
- Supported executive and client-facing reporting by building and validating dashboards and metrics using Power BI and SQL, enabling data-driven insights.
- Acted as a bridge between business users and technical teams, ensuring clarity, traceability, and successful delivery across multiple concurrent initiatives.

Senior Business Analyst | Amerilife Group LLC | USA

Apr 2025 – Aug 2025

- Acted as a Senior Business Analyst supporting Medicare Advantage health plans, working closely with business, operations, and IT teams to improve enrollment, claims, and member lifecycle processes.
- Led requirements gathering and stakeholder workshops for Medicare Advantage initiatives including enrollment workflows, eligibility verification, claims processing, and compliance reporting, translating business needs into BRDs, FRDs, and user stories.
- Analyzed health plan operations data related to claims adjudication, provider networks, utilization management, and member services to identify gaps, inefficiencies, and improvement opportunities.
- Supported CMS-driven Medicare Advantage initiatives, ensuring system and process changes aligned with regulatory requirements, compliance standards, and operational KPIs.
- Partnered with data and reporting teams to design and validate operational dashboards and reports tracking claims turnaround time, enrollment accuracy, and operational performance.
- Coordinated UAT and business validation for Medicare Advantage system enhancements, ensuring end-to-end functionality met business and regulatory expectations.
- Served as a liaison between business users, product owners, and technical teams to ensure timely delivery of enhancements supporting health plan operations and member experience.

Business Analyst - Intern | NGN Apps

Sep 2022 - May 2024

- Partnered with business stakeholders and product owners to gather, analyze, and prioritize requirements, converting business needs into functional specifications, user stories, and reporting requirements.
- Contributed to product planning and roadmap discussions by analyzing financial, inventory, and operational data to support feature prioritization and data-driven decision-making.
- Developed and enhanced Power BI dashboards integrated with Azure SQL, transforming raw data using Excel (Pivot Tables, advanced formulas, Macros) to deliver actionable insights and improve business outcomes by 15%.
- Supported product and business teams by performing exploratory data analysis and validating data sources to ensure accuracy and reliability of product metrics and KPIs.
- Built financial forecasting and performance models in Excel to support budgeting, cash flow analysis, and strategic planning for product and business initiatives.
- Worked closely with engineering and BI teams to translate analytical requirements into technical solutions, ensuring alignment between business objectives and product functionality.

- Assisted in backlog grooming, sprint planning, and release validation, ensuring analytics and reporting deliverables aligned with product timelines and business priorities.
- Participated in User Acceptance Testing (UAT) and post-release validation to confirm dashboards, reports, and analytical features met business and product expectations.
- Created and maintained process documentation, data definitions, and reporting guidelines, improving transparency and usability for business users.

Business System Analyst | Capgemini, India

Sep 2020 - Aug 2022

- Led a team of 12 cross-functional members through a database server migration, creating detailed documentation and optimizing data ingestion schedules to align with business needs.
- Led requirement gathering sessions with stakeholders to capture business needs, translating them into use cases, functional requirements, and user stories in JIRA. Authored comprehensive **Business Requirement Documents (BRD)**.
- Analyzed and documented existing processes to identify improvement opportunities, creating database documentation that defined hierarchies, dependencies, and update frequencies for process optimization.
- Developed data flow and process diagrams to map integration points, **designing and maintaining ETL processes** for efficient data management and analysis.
- Built and managed **Power BI dashboards**, utilizing advanced visualizations and drill-down features to support business reporting. Automated alerts and data integrity checks, saving 8 hours weekly in issue resolution.
- Conducted **User Acceptance Testing (UAT)** in collaboration with developers, ensuring implemented changes aligned with stakeholder expectations and business goals.
- Automated **claims reporting dashboards** in Power BI, providing stakeholders and leadership with timely insights into claims processing and performance, which supported more effective decision-making and faster resolution times.
- Facilitated key Scrum ceremonies such as Daily Stand-ups, **Sprint Planning, Retrospectives, and Backlog Refinement**, working closely with the Product Owner for seamless execution.
- Utilized **MySQL** for data extraction, manipulation, and reporting, optimizing SQL scripts to enhance query performance resulted in reducing patient wait times.
- Led cross-functional teams through a database server migration, creating detailed documentation and optimizing data ingestion schedules to align with business needs.

SKILLS & CERTIFICATIONS

Languages: Python, R, SQL, Java-Selenium, Shell, MatLAB

Big Data & Data Processing Tools: Apache Spark, Kafka, AWS Glue, Talend, Airflow

Visualization Tools: Tableau, Power BI, MS Excel, QlikSense, Looker.

Database: MySQL, Plsql, AWS redshift, Oracle DB

Other skills: Machine learning models, predictive models, Trend analysis, Statistical modelling

Project Management: JIRA, Confluence, MS Project, Trello

EDUCATION

University of South Florida, MS in Business Analytics and Information Systems | FL, USA

Aug 2022 – May 2024

SRM University, Bachelors in Electronics and Communication Engineering | India

Jul 2016 – May 2020
