

PHANINDHR THOTA

Data Center Technician | Phone No: +1 (862) 944-8844 | Email ID: phanindhr@gmail.com

PROFESSIONAL SUMMARY:

Technically skilled and meticulous data centre technician with a track record of success in infrastructure upkeep, system support, and hardware implementation. I have the ability to work with cross-functional teams to manage structured cabling, install and troubleshoot servers, and keep an eye on vital systems for maximum uptime and performance. renowned for having a strong feeling of ownership in high-pressure situations and for using a cool, analytical approach to problem-solving. devoted to operational excellence, ongoing learning, and using accuracy and flexibility to guarantee dependable, secure data centre operations.

TECHNICAL SKILLS:

- **Platforms & Tools:** Windows Server, Linux, Microsoft Azure, AWS, Data Centre Infrastructure Management (DCIM), Building Management Systems (BMS)
- **Infrastructure & Systems Management:** Installation and maintenance of hardware (servers, switches, storage), system monitoring, troubleshooting, asset tracking, and optimizing power/cooling efficiency
- **Networking & Security:** Network device configuration, structured cabling, connectivity troubleshooting, implementing physical security protocols, and supporting compliance audits
- **Documentation & Compliance:** Maintaining inventory logs, managing audit-ready documentation, adhering to operational policies, and using CMMS tools for task and workflow tracking

PROFESSIONAL EXPERIENCE:

National Mutual Insurance Company

Role: Data Analyst

08/2024 – Present | Remote, USA

Responsibilities:

- Using Python, AWS and SQL I analyzed more than a million insurance claims and policyholder records, increasing data accuracy by 20% and automating crucial processes with AWS Lambda and Apache Airflow to save about 200 hours a month. Converted complicated data from several sources into standardized, useful formats through analysis
- Demonstrated ability to drive strategic digital initiatives while consulting and solving problems for C-level executives. Exhibited thought leadership in recognizing client problems and creating comprehensive, data-driven solutions. Proficiency in collaborating with data/insight product providers and hyperscalers (AWS, Azure, GCP) to co-create services.
- Applied statistical and data mining techniques for accurate data interpretation and validation. Supported Energy Management solution implementation through data integration and monitoring

Genpact

09/2020 - 12/ 2022 | Hyderabad

Role: Data Analyst

Technical Responsibilities:

- Contributed to the development of KPIs and performance indicators for strategic and operational reporting; took part in user acceptability testing (UAT) and system integration testing for new data solutions. Created and executed Python and SQL data quality checks for 10 million sales records, greatly improving data integrity and reducing false positives by 25%.
- Using Python and Excel, data reporting procedures were streamlined, resulting in a 30% decrease in report generation time and an improvement in report delivery to stakeholders by two days, allowing for faster insights and prompt action.
- Analyzed over 100,000 customer reviews using Python for sentiment analysis, enhancing accuracy, which informed marketing strategies, also using Google Analytics to track and analyze web traffic from 1 million users.
